Vancouver, BC | 604-727-2452 | [Email](#) | [LinkedIn](#) | [Github](#)

Education

The University of British Columbia

Expected Grad. Dec 2027

Bachelor of Science in Computer Science

Vancouver, BC

- Relevant Coursework: Machine Architecture, Computer Systems, Computer Hardware and Operating Systems, Computer Networking, Software Engineering, Software Construction, Data Structures and Algorithms, Models of Computation, Machine Learning, Artificial Intelligence, Computer Graphics, Introduction to Data Science.

Experience

Basis Learning Foundation

Oct 2025 – Present

Software Development Intern

Toronto ON

- Engineered a full-stack student and alumni tracking platform using **Next.js**, **Django**, and **PostgreSQL**, consolidating scattered records so staff could manage the entire student lifecycle from enrollment through alumni outreach.
- Architected secure **REST APIs** with **Django REST Framework**, adding pagination and filtering across **300+** profiles.
- Reduced manual reporting by developing interactive data visualizations to monitor student information & progress.

Trailmark Systems Inc

Feb 2026 – Mar 2026

Product Analyst Intern

Victoria BC (Remote)

- Investigated **5 mapping providers** to fix remote-area labeling and search issues, comparing cost and geocoding accuracy, then recommended staying on **Mapbox GL** with authoritative Canadian overlay data over a full migration.
- Wrote **7 user stories** with **INVEST** and **Fibonacci** scoring to fix interview issues, breaking **34 points** into dev tasks.
- Built a sprint plan identifying a prerequisite spike and shared pipeline, unblocking a **13-point** epic and avoiding duplicated work.

Wrap-It Moving

Oct 2024 – Jan 2025

Full Stack Developer

Vancouver BC

- Deployed features using **JavaScript**, **TypeScript** and **Github Actions CI/CD**, achieving zero-downtime deployments
- Redesigned and modernized core UI components, substantially improving accessibility and navigation efficiency.
- Created contact form using Node.js, optimizing server response latency and increasing website engagement **60%**
- Optimized mobile UX with **Tailwind CSS**; shipped fully production-ready website on desktop, tablets, and mobile.

Projects

New Terra | C++, OpenGL, ECS Architecture

- Implemented **A* pathfinding** on baked navigation grids with **boids flocking** for smooth enemy movement
- Designed **Poisson disk sampling** system for natural, non-overlapping enemy spawn placement within each room
- Designed three enemy types with distinct AI behaviors including aiming, shooting, and **teleportation** logic

Counter Strike 2 Damage Detections System | Python, OpenCV, TensorFlow

- Built ML-powered system to detect in-game damage events in real time using **Python**, **OpenCV**, and **TensorFlow**
- Achieved **90%+** classification accuracy and reduced overall event misclassification by **35%** via preprocessing
- Engineered automated data pipeline to preprocess raw gameplay footage, improving training efficiency by **40%**
- Led a 3-person cross-functional team using **Agile methods** to successfully deliver a production-ready MVP

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, C++, SQL, C, Golang, R

Framework s & Libraries: React, Next.js, Node.js, OpenCV, TensorFlow, PyTorch, Framer Motion

Tools & Platforms: Git, GitHub, Vercel, Astro, VS Code, RESTful APIs, Claude Code

Concepts: Backend Development, Frontend Development, Fullstack Development, Software Engineering, Machine Learning, Networking, CI/CD, Artificial Intelligence, Microservices, Computer Graphics, DevOps, Automation, Agile
